# API Testing an Application with Karate

## Introduction to Karate and API Testing Fundamentals

**Nertil Poci**
Software Architect

# Overview

**What is Karate?**

**Setup the environment**

- Install required tools
- Setup API

**Create a Karate project**

**Add a Karate Test**

# API Testing an Application with Karate

## Version Check

# Version Check

**This course was created by using:**

- Eclipse 2023-06 (4.28.0)
- Karate 1.4.0
- Java 17

# Version Check

**This course is 100% applicable to:**

- Karate 1.4.0
- Java 11 or above

# Not Applicable

**This course is NOT applicable to:**

- Java 10 or lower
- Karate 1.3 or lower

Karate is an open-source unified test automation platform combining API testing, API performance testing, API mocks & UI testing

# Karate: All in one framework

Request/Response Validation

Data Driven

Test Scenario Management

# Features

- Simplified Syntax
- Built-in Test Doubles
- Data-Driven Testing
- Powerful Assertions
- Parallel Execution

# Tech Stack

- Built using Java
- Cucumber-JVM
- Apache HttpClient
- JSON and XML Support
- Gradle and Maven
- JavaScript Engine

# Preparing Our Environment

# Creating Our First Karate Project

# Adding Our First Karate Test

# Summary

**Introduced Karate**

**Setup the necessary tools**

- Eclipse

**Run the API**

**Setup a Karate project**

- Created new project
- Added  first API test
